Introduction

Introduction

ntroduction

With the increased usage of Internet it is becoming extremely important to manage and secure your internet / network backbone. Also this is a new avenue for hospitality, telecom industries to add to their revenue stream.

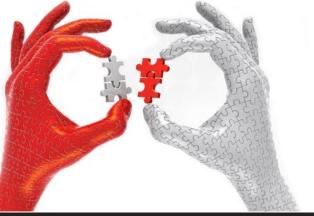

Smart guard provides simple yet effective solution for anyone wanting to manage and secure internet / network traffic. Its a multiple functional tool with a powerful features like advanced filter based bandwidth management, content filter, firewall virus scanner, anti spam engine, subscriber management system with the pre-paid coupons and post paid billing system. It also have build in server like VPN servers DHCP server & cache server.

With integration to payment gateways like Paypal & others it make the solution more effective(useful), robustness to the system is added by build in SMS & Email Alert functionality.

Smart guard is for any organization with more than 5 computer system. The software is already used by ISP's, Hotels, Hospitals, Initiatives, Corporates, SME's, Enterprises, Cafes, Hotspots & Internet Distributors.

Aligning to Customer needs...

We make every attempt to completely understand the exact needs jof our customers. This ensures that our customers ultimately get what they are looking for.

Benefits

Benefits

Bandwidth Manager is a converged Policy and Charging Rules Function (PCRF), GUI-based bandwidth management solution that integrates with your network to simply create bandwidth-related rules on a per service and per subscriber basis. It allows you to hyper-customize any type of mobile broadband service or offering to serve a diverse subscriber base.

Flexible and intelligent, Smart guard solution lets you:

- Offer differentiated plan tiers. Simply create and price various tiers of service, delivering differentiated quality levels and options.
- Create service-based policies. Establish policies to define services and control how bandwidth and access are managed for specific subscribers, plans, applications, products, time of day and more, based on various criteria.
- Support any access type.Utilize a converged, centralized bandwidth management policy solution across multiple access networks, such as 3G, 4G or DSL.
- Guarantee quality. Ensure that your subscribers get the level of service they need for bandwidth sensitive applications such as IPTV, VoIP and gaming.
- Graphical user interface. Easily create and define new service packages using intuitive on-screen tools to rapidly create rules and get new offerings to market quickly.

Save time with basic tasks and focus more on making a business impact

Service Areas

Service Areas

Are PLVICE

University, School, Library

Educational institutions grants students and visitors limited access, usually monthly renewable and with daily limitations. Block access to adult websites and redirect them to restricted page, limit bandwidth per user, assign higher speeds to selected users, track usage logs and get real-time statistics.

Companies, Government

Reduce bandwidth requirements, log visited URLs, prevent personal Internet use during working hours by limiting access to YouTube, Facebook, and other websites you define. Allow Internet use for unknown users with limited rights, or grant Internet access only to known users in your network.

Apartment Blocks

Scalable from 1 room to 1 city, our software helps you easily implement bandwidth management without any client installations. Maintain user accounts, share Internet access, get statistics and usage reports, all within a single application. Build your WiFi and wired network with any hardware you already own.

ISP, WISP, Telecom

Internet service providers may easily control Internet use, create separate access rules for known and unknown users, share Internet connection, maintain users and get reports on usage, bandwidth, URL logs. It supports wired and wireless connections and is hardware independent.

Service Areas

Service Areas

Are

Guest Internet Services

Whether it's a WiFi, wireless, wired, cable or satellite connection, our software takes care of the guest Internet control. It records every customer session time, IP, MAC, and URLs visited, and protects your business by preventing access to blacklisted sites.

Internet Cafe, Game Center

Reduces your overall bandwidth requirements and improves network efficiency. Integrates with Antamedia industry leading software for Internet Cafes: grants Internet use when a user login, and cuts connection after logout, saving bandwidth and money.

WE SPECIALISE IN SECURING NETWORKS OF

- ISP's WISP's, TELECOM Sectors
- Educational Universities, Colleges, Schools
- ► SME's & Corporate Sectors
- ▶ Hotels, Guest Houses & Hospitality Sectors
- Hotspot's WiFI Zones, Cyber Cafe's
- ► Finance & Medical Sectors
- Other Corporates & Companies

Why Smart Guard

Why Smart Guaro

Consider Smart Guard Bandwidth Manager if you want to:

Deliver the experience.

Deliver the differentiated, personalized services that match your subscribers' lifestyle, desired service characteristics and budget, while ensuring consistent levels of quality for an unbeatable experience.

Faster time to market.

Define and develop new services quickly for fast time to market. Easily make and implement changes as needed to keep offerings current and profitable.

Profitability.

Enhance your mobile broadband offerings to deliver highly profitable services, attract subscribers and reduce churn. Optimize your available network bandwidth to save up to 25% in future capex expenditures.

Bandwidth equals money.

Bandwidth costs thousands of dollars a month, and anything you can do to lower your bandwidth consumption will save your money in the long run.

Why Smart Guard

Why Smart Guard

Why Smart Guaro

Improved Internet experience: Bandwidth management can make the difference between a network that's perceived as sluggish and unresponsive and one that seems fast and reliable. For delay-sensitive applications, such as Voice over IP, bandwidth management might make the difference between a device that works and one that's unusable.

Fairness through compromise. Someone accessing a low-bandwidth, text-based site shouldn't have to put up with a slow connection because someone else is downloading 5-GB movies onto their laptop. Going to the opposite extreme and blocking all video traffic or all file-sharing traffic is also unfair because it penalizes the moderate, occasional downloader as much as it hurts the patron downloading 50 albums every afternoon. Students often use BitTorrent or streaming video to access lectures and other files related to their classes. In other words, it's not always the particular protocol or application that's a problem; it's the few folks who use more than their share. Bandwidth management strikes a compromise. You can limit bandwidth usage on a per-user basis, a per-protocol basis or both. No single user or type of traffic can hog everything, but they won't be completely blocked either.

Improved traffic prioritization: Although it's hard to give one stream of patron traffic priority over another based on your own judgments regarding the appropriateness of the content, libraries often have valid reasons for giving some bandwidth preferential treatment. Certain voice and video applications simply won't function if they don't have reliable bandwidth and low latency. Also, you may decide that traffic from staff machines should have priority over patron traffic since your library depends on the effective, reliable transmission of catalog records and other files.

Opportunities for remote and rural libraries: Unfortunately, some parts of the country still don't have access to high-speed data lines, or the prices are prohibitive. In these cases, bandwidth management can make a big difference. Even if you don't have money to spend on a high-end commercial device, you can put some open-source software on a desktop computer with two network cards and use that as your Web caching server or your traffic-shaping server.

The Invincible Technology

Features at a Glance

Bandwidth Management

- IP Based Traffic Management
- Time Based Traffic Management
- ACL Based Traffic Management
- Reseller Based Traffic Management
- ISP Based Traffic Management
- IP Pool Based Traffic Management (optional)
- Online user utilization graph & reports.

Antivirus for Web Browsing scan virus & Anti Spam

- Based on gateway level
- Scanning on HTTP
- Detection should be relevent , continues & real time
- Detailed reporting
- Port Based Scan Virus
